Homework

1. Write a query to display all records from the table customers.
2. Write a query to display only customer_first_name and customer_last_name from the customers table.
3. Write a query to display all customers who live in ZIP code 22801.
4. Write a query to show all columns from the products table.
5. Write a query to list all product_name and product_size from the products table.
6. Write a query to find products whose product_qty_type is 'lbs'.
7. Write a query to select all customers whose customer_first_name is 'Jane'.
8. Write a query to display all records from the vendor_inventory table where the quantity is greater than 10.
9. Write a query to display all product_id and vendor_id from the vendor_inventory table where the original_price is less than 7.
10. Write a query to display purchases (customer_purchases) where the quantity is greater than 2.
11. Write a query to list all unique vendor_id values from the vendor_booth_assignments table.
12. Write a query to show all purchases made on the date '2019-07-03'.
13. Write a query to display all columns from the vendor_booth_assignments table where the booth_number equals 7.
14. Write a query to display product_name and product_size ordered by product_name in ascending order.
15. Write a query to display product_name and product_size ordered by product_size in descending order.
16. Write a query to display all customers ordered by their customer_last_name.
17. Write a query to show all customer purchases (customer_purchases) ordered by transaction_time.
18. Write a query to list all records from vendor_inventory ordered by quantity in descending order.
19. Write a query to find all records from products where the product_category_id equals 1.
20. Write a query to list all customers whose last name starts with the letter 'W'.
21. Write a query to show the customer_first_name and customer_zip of all customers who **do not** live in ZIP code 22801.
22. Write a query to select all product_name where product_name contains the word 'Peppers'.
23. Write a query to display all products whose product_size is 'medium' **and** product_qty_type is 'lbs'.
24. Write a query to display all purchases made **after** '2019-07-05'.
25. Write a query to show all customers whose last name **ends with** 'son'.
26. Write a query to show product_name, product_size, and product_qty_type where product_qty_type is not 'unit'.
27. Write a query to show all purchases (customer_purchases) where cost_to_customer_per_qty equals 6.99.

28. Write a query to display all vendor_inventory records for vendor_id = 7.
29. Write a query to display all customers whose first name has **five letters**.
30. Write a query to select all rows from vendor_inventory where quantity is **between 8 and 12**.
31. Write a query to show all products that belong to product_category_id **in (1, 3)**.
32. Write a query to show product_name from products where product_size is either 'small' or 'large'.
33. Write a query to select all purchases (customer_purchases) on 2019-07-03 ordered by quantity descending.
34. Write a query to select all customers whose last name is either 'Harris' or 'Diaz'.
35. Write a query to display product_name and product_id ordered first by product_category_id, then by product_name.
36. Write a query to show all rows from vendor_booth_assignments where the booth_number is **not between 5 and 10**.
37. Write a query to display all purchases (customer_purchases) where quantity is **less than 1**.
38. Write a query to show all products whose product_name **starts with 'B'**.
39. Write a query to display all customers whose last name **contains** the letter 'a'.
40. Write a query to show all vendor_inventory records ordered by market_date ascending and quantity descending.
