Lecture 6: Grouping and Aggregation

#Agenda

1) Data aggregating (grouping of data)

2) Hands on practice problems.

Case

WHEN condition is true then something will happen

WHEN " " " then " " "

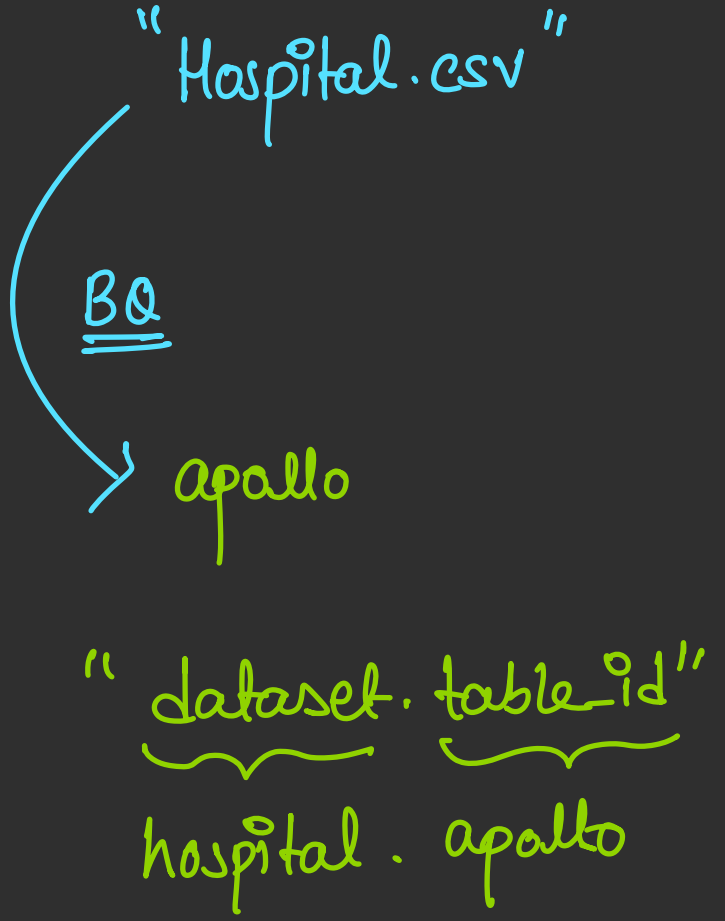

else " " " "

END

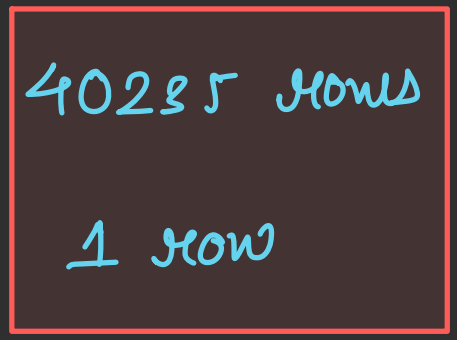

id	Age
1	12
2	13
3	14
4	15

```
Select
  Age,
  Case
    When Age > 12 and Age < 14 then "Yes"
    Else "No"
  End as "Label"
from
  Table
```

Age	Label
12	No
13	Yes
14	No
15	No

"Hospital.csv"
BQ
apollo
"dataset.table_id"
hospital.apollo

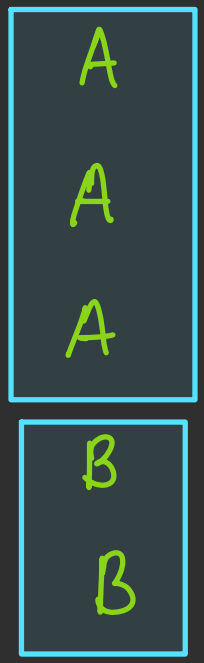

```
Select
Insurance_provider,
count(Insurance_provider)
from
apollo;
```

```
Select
Insurance_provider,
count(Insurance provider)
from
apollo,
group by
Insurance - provide
```

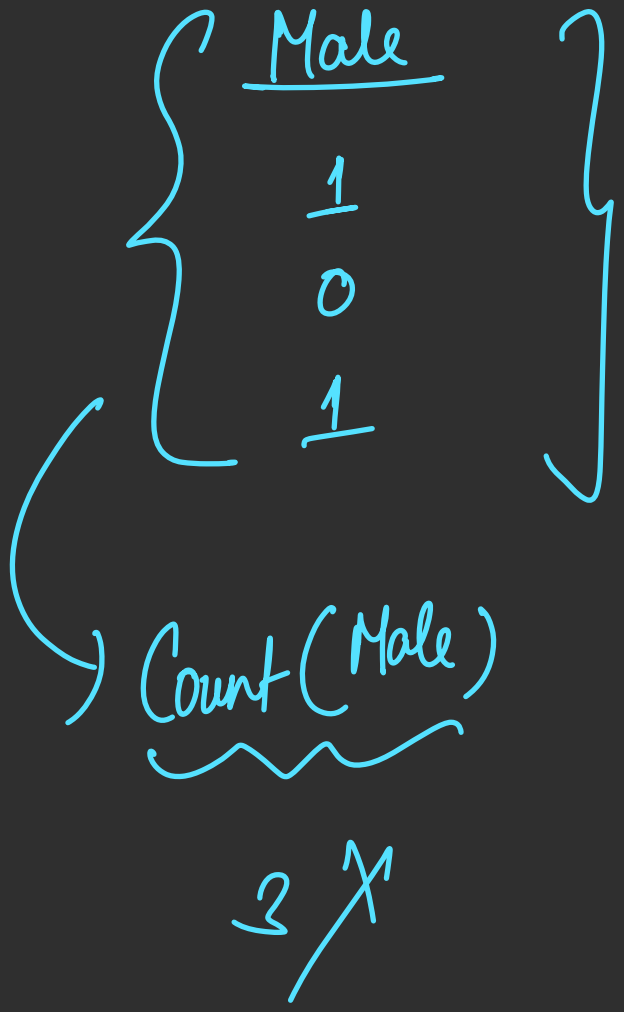

} For each IP get the count

Med_Con

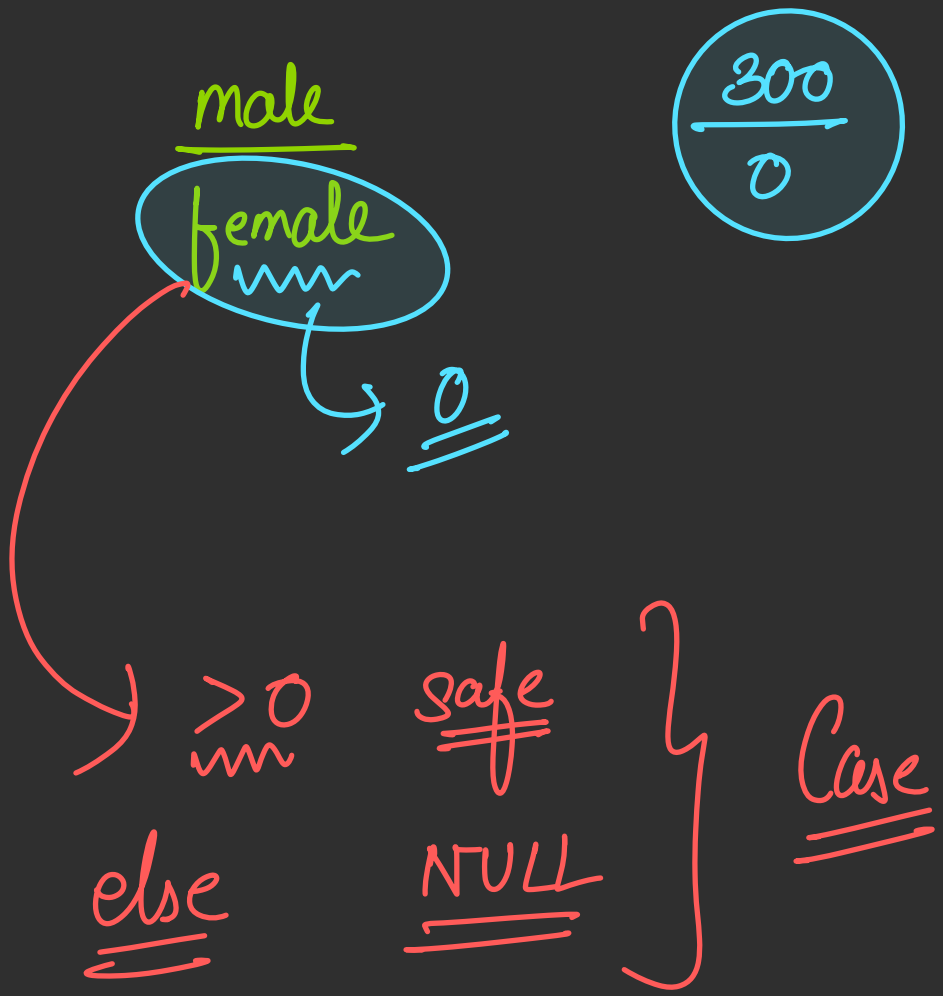

Med Con	freq
A	3
B	2

```
Select Med_Con, Count(Med Con)
from
Table
group by Med_con
```

1 + 0 + 1 = 2

Sum(Male)

male
female
0
300
0
>0
safe
else
NULL
Case

Select

Doctor, count(*), count(Doctor)

id

→ Doctor, id, count(*), count(id)

	id
A	1
A	1
A	Null ✗
B	2
B	2
