8: Write a query to study the length of time users spend listening to tracks, grouping them into categories based on play duration in seconds:

- 'Short_time' for less than 180 seconds,
- 'Mid_time' for between 180 and 300 seconds (including both), and
- 'Long_time' for more than 300 seconds, to understand listening habits.

Return:

- Return the column names as per the sample output.
- Arrange the results to show categories with the lowest number of tracks first, followed by others in a way that keeps the list easy to review.

Question 9: Write a query to investigate the most replayed tracks on Spotify, focusing on their artists, total replay counts, and average user ratings, to identify top favourites for featured playlists. Group the results by track name and artist.

Return:

- Return the column names as per the sample output.
- Show the top 10 tracks, arranged to feature those with the highest replay counts first, followed by others in a way that keeps the list organized.
