Product Diagnostics - Analyzing a metric change

You notice that the percentage of users who clicked on a search result about a Facebook Event increased 15% week-over-week. How would you investigate this?

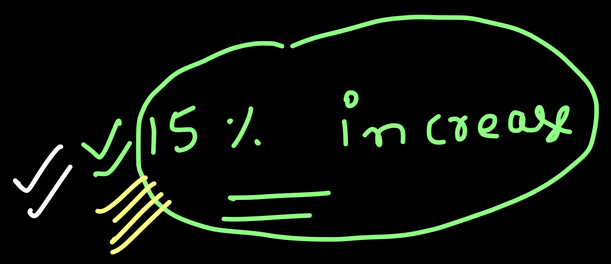

- ✓ C - Clarify
- ✓ R - Rule out
- ✓ I - Internal Data
- ✓ E → External Data

Made with Goodnotes

Clarify

* Are you talking about fb event searches ? (or) general search

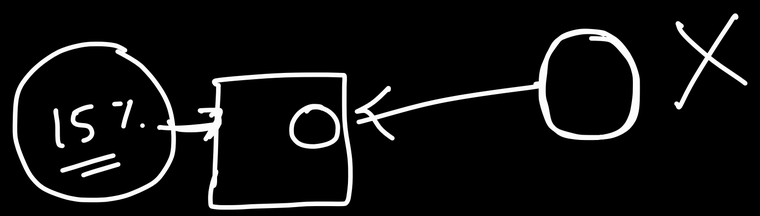

= No of users who clicked on event results after search

of users who searched by any keyword

→ 15 % WOW

Rule out

- → Has There any bug in the code ?
- → is there any glitch on 3rd s/w
- → Outliers

Made with Goodnotes

Internal Data

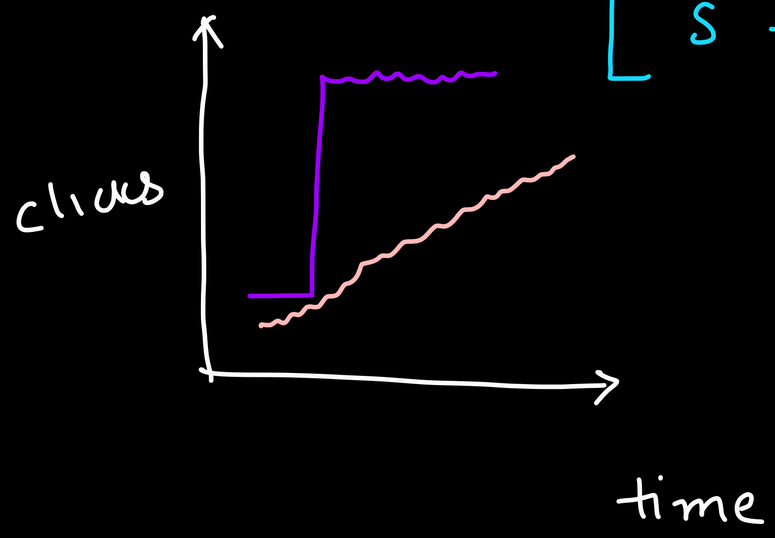

T R O P i C S

- T – Time
- R – Region
- O – other related
- P → platform
- C → canibalisation
- S – Segmentation

* **Time**

→ Sudden Increase :

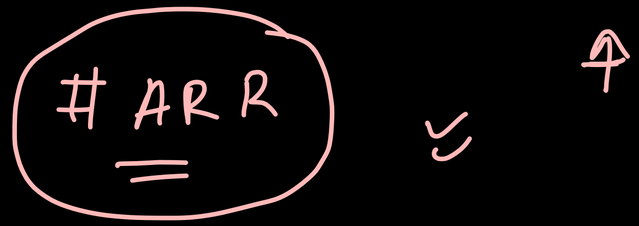

→ Gradual Increase

Made with Goodnotes

Region ⩢: US / India / ... Bangalore / .... (or) Global

Other Related features affected:

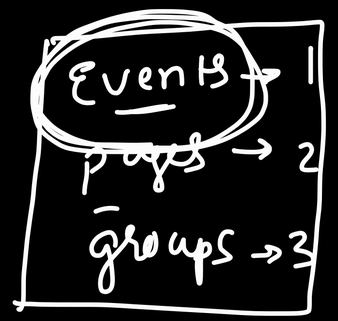

✓ Platform :

Mobile / Desktop

MAC / window

Android / ios ?

✓ Cannibalization : ↓ pages / groups / profiles

Segmentation :

✓→ Age :

✓→ Gender

✓→ New vs Existing Users

Made with Goodnotes

External Data

→ Competitor product offering on a similar

→ Govt policy changes

→ $1 → RS100
