Agenda

* Root Cause Analysis - 2

  - Uber case study

T

Problem statement

Uber has received some complaints from their customers facing problems related to ride cancellations by the driver and non-availability of cars for a specific route in the city.

The uneven supply-demand gap for cabs from City to Airport and vice-versa is causing a bad effect on customer relationships as well as Uber is losing out on its revenue.

The aim of analysis is to identify the root cause of the problem (i.e. cancellation and non-availability of cars) and recommend ways to tackle the situation.

$$\text{Ride cancellation rate} = \frac{\#\text{ of cancelled bookings}}{\#\text{ of confirmed bookings}}$$

Made with Goodnotes

1. Is this thing happening for specific devices? [Android or iOS]

2 Is this ↑ in cancellation rate gradual (or) sudden?

3. Issue with driver app?

4.

Made with Goodnotes

1 Frequency of booking requests getting cancelled each hour

2. pickup & Destination of the cancelled booking requests

3 Days of week in which the cancellation rate is max

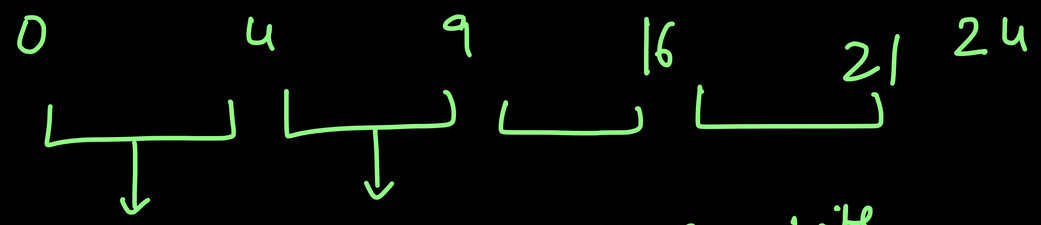

4. Time of day during which the cancellation rate is peak

5. Time of day when the demand is highest & supply is low

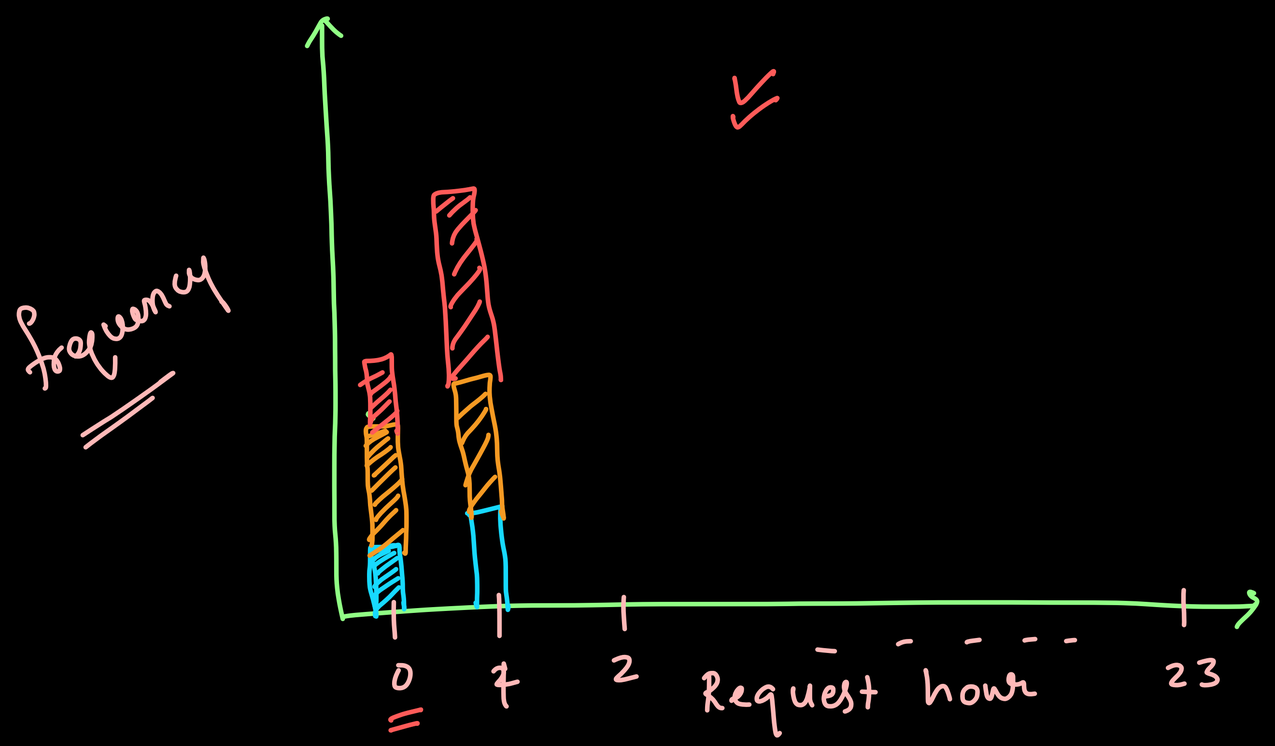

" " cabs are available but demand is low

6.
